

Moringa - The Wonder Tree, January 2008

Miami Beach, January 2008

After my students and I arrived at the conclusion that the town needs a steady supply of clean, safe water, I was looking for a low cost water filter system. As I perused the internet, I came across the Moringa tree. The more I read, the more intrigued I became. One tree can supply enough material for one family to filter their water all year. The Moringa tree grows in Haiti. Scientists and lay persons alike publish their findings on the extremely interesting website: "The Moringa News Network". www.moringanews.org

Here are some excerpts from a sample article written in Nigeria a while back:

"Studies on the potential use of Medicinal Plants
and Macrofungi (Lower plants) in water and waste water purification"
